

Reg No.: _____

Name: _____

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
Fourth Semester B.Tech Degree Examination June 2022 (2019 scheme)

Course Code: MAT206
Course Name: GRAPH THEORY

Max. Marks: 100

Duration: 3 Hours

PART A*(Answer all questions; each question carries 3 marks)*

Marks

- | | | |
|---|--|---|
| 1 | Prove that the maximum number of edges in a simple graph with n vertices is $\frac{n(n-1)}{2}$. | 3 |
| 2 | Define walk, path and circuit with examples. | 3 |
| 3 | Draw a graph which is Eulerian but not Hamiltonian | 3 |
| 4 | Distinguish between strongly connected digraphs and weakly connected graphs with examples. | 3 |
| 5 | Prove that there is one and only one path between every pair of vertices in a tree. | 3 |
| 6 | Draw all unlabelled trees with 5 vertices. | 3 |
| 7 | Prove that the edge connectivity of a graph cannot exceed the degree of the vertex with the smallest degree in G . | 3 |
| 8 | Define planar graph and non-planar graph with examples. | 3 |
| 9 | Write the adjacency matrix for the following graph. | 3 |

- | | | |
|----|---|---|
| 10 | Prove that the chromatic polynomial of a complete graph with 4 vertices is $\lambda(\lambda - 1)(\lambda - 2)(\lambda - 3)$. | 3 |
|----|---|---|

PART B*(Answer one full question from each module, each question carries 14 marks)***Module -1**

- | | | |
|----|--|---|
| 11 | a) Prove that the number of vertices of odd degree in a graph is always even | 7 |
|----|--|---|

- b) If a connected graph G is decomposed into two subgraphs g_1 and g_2 , then prove that there must be at least one vertex common between g_1 and g_2 7
- 12 a) Determine whether the following graphs are isomorphic or not. 7

- b) If a graph has exactly two vertices of odd degree, then prove that there must be a path joining these two vertices. 7

Module -2

- 13 a) In a complete graph with n vertices, prove that there are $\frac{n-1}{2}$ edge-disjoint Hamiltonian circuits, if n is an odd number ≥ 3 . 7
- b) 1) For a binary relation “is greater than” on the set $X = \{3, 4, 7, 5, 8\}$ 7
- Draw the digraph representing the above relation
 - Write its relation matrix
- 2) Define equivalence digraph with an example
- 14 a) Prove that a connected graph G is an Euler graph if and only if all vertices of G are of even degree. 7
- b) Define Hamiltonian circuit and Hamiltonian path. Give an example for each. 7
- Also draw a graph that has a Hamiltonian path but not a Hamiltonian circuit.

Module -3

- 15 a) Prove that every tree has either one or two centers 7
- b) Apply Kruskal’s algorithm to find the minimal spanning tree for the following weighted graph. 7

- 16 a) For any spanning tree of a connected graph with n vertices and e edges, prove that there are $n-1$ tree branches and $e-n+1$ chords. For the following graph find two spanning trees and hence show that an edge that is a branch of one spanning tree can be a chord with respect to another spanning tree of same graph. 7

- b) Use Dijkstra's algorithm to find the shortest path for the following weighted digraph and find the shortest distance from vertex a to other vertices. 7

Module -4

- 17 a) Illustrate the statement: "The ring sum of any two cut-sets in a graph is either a third cut-set or an edge disjoint union of cut-sets", in the following graph. 7

- b) Define edge connectivity, vertex connectivity separable and non-separable graph. 7
Give an example for each.
- 18 a) Prove that the complete graph on 5 vertices is non-planar 7
b) Draw the geometric dual of the following graph 7

Module -5

- 19 a) For the following graph find the 7
i. Incidence matrix
ii. Path matrix between v_2 and v_5
iii. Circuit matrix

- b) Draw a connected graph and show that the rank of its incidence matrix is one less than the number of vertices. 7
- 20 a) Prove that every tree with two or more vertices is 2-chromatic 7
b) Prove that a covering g of a graph is minimal if and only if g contains no path of length three or more. 7
